

Risks of formula

- **Formula Lacks Many Of The Good Things Babies Need**

- **Formula Is More Difficult To Digest Than Breast Milk, Resulting In More Spit Up And Constipation**

Formula fed babies

Why to avoid using bottles and teats?

- Baby may prefer artificial teat (easier to suck) and refuse to suckle on the mother's breast

- Giving pacifier instead of a breastfeeding, result in baby taking less milk which affect his growth

- Teats, bottles, and pacifiers can carry infection

- Risk of dental carries
